NITI Aayog Launches Geospatial Energy Map of India

- Geospatial Energy Map of India was launched by Dr Rajiv Kumar (Vice Chairman, NITI Aayog), Dr V K Saraswat (Member, NITI Aayog), and Shri Amitabh Kant (CEO, NITI Aayog) on 18 October 2021. Dr K Sivan, Chairman ISRO & Secretary Department of Space attended the launch event.
- NITI Aayog in collaboration with Indian Space Research Organisation (ISRO) has developed a comprehensive Geographic Information System (GIS) Energy Map of India with the support of Energy Ministries of Government of India. The GIS map provides a holistic picture of all energy resources of the country which enables visualization of energy installations such as conventional power plants, oil and gas wells, petroleum refineries, coal fields and coal blocks, district-wise data on renewable energy power plants and renewable energy resource potential, etc through 27 thematic layers.
- The map attempts to identify and locate all primary and secondary sources of energy and their transportation/transmission networks to provide a comprehensive view of energy production and distribution in a country. It is a unique effort aimed at integrating energy data scattered across multiple organizations and to present it in a consolidated, visually appealing graphical manner. It leverages latest advancements in web-GIS technology and open-source software to make it interactive and user friendly. The Geospatial Energy Map of India will be useful in planning and making investment decisions. It will also aid in disaster management using available energy assets.

World Energy Outlook Report 2021: IEA

- International Energy Agency (IEA) released the World Energy Outlook (WEO) Report 2021.
- Published every year, the WEO provides critical analysis and insights on trends in energy demand and supply.
- The 2021 report signaled pressure on governments to push for greater climate action at the Conference of Parties (COP26) summit (in Glasgow, UK).
- Earlier, IEA also released its Net Zero Emissions (NZE) Roadmap - named 'Net Zero by 2050'.
- Renewable energy sources, such as solar, wind, hydropower and bioenergy, need to form a far bigger share in the rebound in energy investment after the coronavirus pandemic.

- Demand for renewables continues to grow. However, this clean energy progress is still far too slow to put global emissions into sustained decline towards net zero by 2050, which the IEA believes will help limit the increase in global temperatures to 1.5 degrees Celsius.

NASA launches Lucy spacecraft, first space mission to study Trojans Asteroids

- Nasa launched Lucy spacecraft, the first space mission to study the Trojans Asteroids. Lucy will journey for 12 years, observing one main belt asteroid and seven Trojan asteroids.
- The swarms of Trojan asteroids associated with Jupiter are thought to be remnants of the primordial material that formed the outer planets. These primitive bodies hold vital clues to deciphering the history of the solar system.
- The Jupiter Trojan asteroids are leftover raw materials from the formation of our Solar System's giant planets (Jupiter, Saturn, Uranus, and Neptune) over 4.5 billion years ago.
