9:00AM

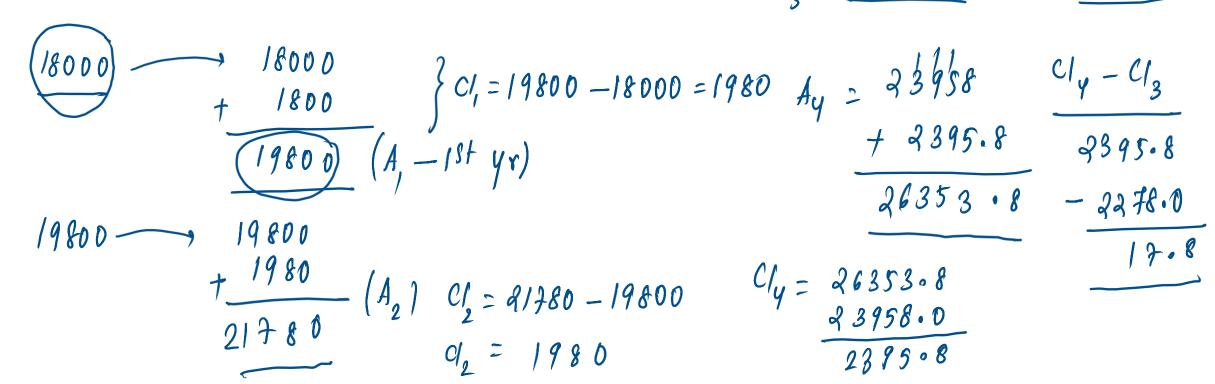

Q) A sum of ₹ 18,000 is lent at 10% p.a. compound interest, compounded annually. What is the difference between the compound interest for 3rd year and 4th year?

$$\frac{2/780}{+2/78} \longrightarrow 2/780 \quad C_{3} = 23958$$

$$\frac{-2/780}{-2/780} \longrightarrow 2278$$

Q) A sum of ₹ 18,000 is lent at 10% p.a. compound interest, compounded annually. What is the difference between the compound interest for 3rd year and 4th year?

(a) ₹220.60

(b) ₹217.80°

(c) ₹221.80

(d) ₹215.40

Q) A sum of ₹5,000 is divided into two parts such that the simple interest on the first part for $4\frac{1}{5}$ years at $6\frac{2}{3}\%$ p.a is $\frac{\sqrt{3}}{5} = \chi \times \frac{\sqrt{3}}{3} \times \frac{\sqrt{3}}{2} = \frac{28}{3} \chi$

double the simple interest on the second part for $2\frac{3}{4}$ years at 4% p.a. What is the difference between the two parts?

$$\frac{38}{100} \chi = 2 \left(\frac{550 - 1/\chi}{100} \right)$$

$$\frac{50 \chi}{100} = 1100 \Rightarrow \chi = 2200$$
