NAVJYOTI SIR

## 08 Oct 2024 Live Classes Schedule

8:00AM -- 08 OCTOBER 2024 DAILY CURRENT AFFAIRS RUBY MA'AM

9:00AM -- 08 OCTOBER 2024 DAILY DEFENCE UPDATES DIVYANSHU SIR

### SSB INTERVIEW LIVE CLASSES

9:30AM -- OVERVIEW ON TAT & WAT ANURADHA MA'AM

### NDA 1 2025 LIVE CLASSES

11:30AM -- GK - AGRICULTURE RUBY MA'AM

1:00PM -- BIOLOGY - MCQ - CLASS 1 SHIVANGI MA'AM

4:00PM -- MATHS - TRIGONOMETRY - CLASS 1 NAVJYOTI SIR

5:30PM -- ENGLISH - SPOTTING ERRORS - CLASS 4 ANURADHA MA'AM

### CDS 1 2025 LIVE CLASSES

11:30AM -- GK - AGRICULTURE RUBY MA'AM

1:00PM -- BIOLOGY - MCQ - CLASS 1 SHIVANGI MA'AM

5:30PM -- ENGLISH - SPOTTING ERRORS - CLASS 4 ANURADHA MA'AM

✓ 7:00PM -- MATHS - TIME & WORK - CLASS 3 NAVJYOTI SIR

### AFCAT 1 2025 LIVE CLASSES

4:00PM -- STATIC GK - AWARDS & HONOURS DIVYANSHU SIR

5:30PM -- ENGLISH - SPOTTING ERRORS - CLASS 4 ANURADHA MA'AM

✓ 7:00PM -- MATHS - TIME & WORK - CLASS 3 NAVJYOTI SIR

Q)  $A$  can do a job in 3 days less time than  $B$ .  $A$  works at it alone for 4 days and then  $B$  takes over and completes it. If altogether 14 days were required to finish the job, then in how many days would each of them take alone to finish it?

- (a) 17 days, 20 days    (b) 12 days, 15 days ✓     $B \rightarrow 10$  days  
 (c) 13 days, 16 days    (d) None of these

$$A \rightarrow (x-3) \text{ days} \rightarrow \frac{1}{x-3}$$

$$B \rightarrow x \text{ days} \rightarrow \frac{1}{x}$$

$$4 \left( \frac{1}{x-3} \right) = \frac{4}{x-3}$$

$$\text{Rem. Work} = 1 - \frac{4}{x-3} = \frac{x-3-4}{x-3} = \left( \frac{x-7}{x-3} \right)$$

$$\frac{\frac{x-7}{x-3}}{10} = \frac{1}{x}$$

$$10 = \frac{x(x-7)}{x-3} \rightarrow \text{works for option (b)}$$

$$\frac{\overset{5}{\cancel{15}} \overset{2}{\cancel{8}}}{\cancel{12} \cancel{3}} = 10$$

- Q)**  $A$  can do a job in 3 days less time than  $B$ .  $A$  works at it alone for 4 days and then  $B$  takes over and completes it. If altogether 14 days were required to finish the job, then in how many days would each of them take alone to finish it?
- (a) 17 days, 20 days    (b) 12 days, 15 days  
(c) 13 days, 16 days    (d) None of these

**Ans: (b)**

**Q)** A group of men decided to do a job in 4 days. But since 20 men dropped out every day, the job completed at the end of the 7th day. How many men were there at the beginning?

(a) 240

(c) 280

$$\left. \begin{array}{l} \text{(a) 240} \\ \text{(c) 280} \end{array} \right\} \underline{x}$$
 (b) 140 (d) 150

$$4 \times x = (x \times 1) + (x - 20) + (x - 40) + (x - 60) + (x - 80) + (x - 100) + (x - 120)$$

$$(a) \text{ LHS} = 960 \quad \text{RHS} = 240 + 220 + 200 + \underline{180} + \underline{160} + 140 + 120 \neq 960$$

(1000)

$$(b) \text{ LHS} = 560 \quad \text{RHS} = \underline{140} + \underline{120} + \underline{100} + \underline{80} + \underline{60} + \underline{40} + \underline{20}$$

CDS & AFCAT 1 2025 LIVE CLASS - MATHS - PART 3

$$\underline{(OR)} \quad 4x = x + (x-20) + (x-40) + (x-60) + (x-80) + (x-100) + (x-120)$$

$$= 7x - 20(1+2+3+4+5+6)$$

$$= 7x - 20 \frac{(6)(7)}{2}$$

$$4x = 7x - 420$$

$$3x = 420$$

$$x = 140$$

**Q)** A group of men decided to do a job in 4 days. But since 20 men dropped out every day, the job completed at the end of the 7th day. How many men were there at the beginning?

- (a) 240
- (b) 140
- (c) 280
- (d) 150

**Ans: (b)**

Q) A can do 50% of the job in 16 days, B can do  $\frac{1}{4}$ th of the job in 24 days. In how many days can they do  $\frac{3}{4}$ th of the job working together?

- (a) 24      (b) 9      (c) 21      (d) 18

$$A \rightarrow 32 \text{ days}$$

$$B \rightarrow 24 \times 4 = \underline{96 \text{ days}}$$

$$\frac{1}{32} + \frac{1}{96} = \frac{3+1}{96} = \frac{4}{96}$$

$$= \frac{1}{24}$$

$$\begin{array}{l} 1 \rightarrow \frac{1}{24} \\ \times 18 \quad \quad \quad \times 18 \\ \hline \frac{3}{4} = \frac{18}{24} \\ \hline 18 \text{ days} \end{array}$$

(OR)

$$\frac{\frac{3}{4}}{\frac{1}{24}} = \frac{24 \times 3}{4} = \underline{18}$$

Q) A can do 50% of the job in 16 days, B can do  $\frac{1}{4}$ th of the job in 24 days. In how many days can they do  $\frac{3}{4}$ th of the job working together?

- (a) 24      (b) 9      (c) 21      (d) 18

Ans: (d)

Q) A and B can together complete a task in 18 hours. After 6 hours A leaves. B takes 36 hours to finish rest of the task. How many hours would A have taken to do the task if he worked alone?

(a) 54

(b) 45

(c) 21

(d) 27

$$(A+B) \rightarrow \frac{1}{18}$$

$$6 \left( \frac{1}{18} \right) = \frac{1}{3}$$

$$\text{Rem. work} = 1 - \frac{1}{3} = \frac{2}{3}$$

$$\frac{\frac{2}{3}}{(x)} = \frac{36}{18}$$

*(B's 1 day work)*

$$x = \frac{\frac{2}{3}}{\frac{36}{18}} = \frac{2}{3} \times \frac{18}{36} = \frac{1}{3}$$

$$\frac{1}{54} + \frac{1}{y} = \frac{1}{18} \Rightarrow \frac{1}{y} = \frac{3-1}{54} = \frac{2}{54} = \frac{1}{27}$$

$$y = 27 //$$

**Q)** A and B can together complete a task in 18 hours. After 6 hours A leaves. B takes 36 hours to finish rest of the task. How many hours would A have taken to do the task if he worked alone?

- (a) 54      (b) 45      (c) 21      (d) 27

**Ans: (d)**

Q) Two workers 'A' and 'B' working together completed a job in 5 days. Had 'A' worked twice as efficiently as he actually did and 'B' worked one-third as efficiently as he actually did, the work would have completed in 3 days. In how many days could 'A' alone complete the job?

- (a)  $3\frac{1}{2}$  days (b)  $4\frac{1}{6}$  days (c)  $5\frac{1}{2}$  days (d)  $6\frac{1}{4}$  days

$$A \rightarrow \frac{x \text{ days}}{\left(\frac{1}{x}\right)}$$

$$B \rightarrow \left(\frac{1}{5} - \frac{1}{x}\right)$$

$$2\left(\frac{1}{x}\right) + \frac{1}{3}\left(\frac{1}{5} - \frac{1}{x}\right) = \frac{1}{3}$$

$$\frac{2}{x} + \frac{1}{15} - \frac{1}{3x} = \frac{1}{3}$$

$$\frac{6-1}{3x} = \frac{4}{15} \Rightarrow$$

$$3x = \frac{5 \times 15}{4}$$

$$x = \frac{75}{12} = 6\frac{3}{4} = 6\frac{1}{4} \text{ days}$$

**Q)** Two workers 'A' and 'B' working together completed a job in 5 days. Had 'A' worked twice as efficiently as he actually did and 'B' worked one-third as efficiently as he actually did, the work would have completed in 3 days. In how many days could 'A' alone complete the job?

- (a)  $3\frac{1}{2}$  days   (b)  $4\frac{1}{6}$  days   (c)  $5\frac{1}{2}$  days   (d)  $6\frac{1}{4}$  days

**Ans: (d)**

**Q)** Two pipes A and B can fill a tank in 36 min. and 45 min. respectively. A waste pipe C can empty the tank in 30 min. First A and B are opened. After 7 min., C is also opened. In how much time, the tank is full?

- (a) 60 min                      (b) 30 min  
(c) 39 min                      (d) 13 min

$$\frac{A}{\frac{1}{36}} \quad \frac{B}{\frac{1}{45}}$$

$$\frac{C}{\left(\frac{1}{30}\right)}$$

$$\left(\frac{1}{36} + \frac{1}{45}\right) \times 7 = \left(\frac{10+8}{360}\right) \times 7 = \frac{7}{20}$$

$$\text{Rem.} \rightarrow 1 - \frac{7}{20} = \left(\frac{13}{20}\right)$$

$$\frac{\frac{13}{20}}{\left(\frac{1}{36} + \frac{1}{45} - \frac{1}{30}\right)}$$

$$= \frac{13}{20} \div \left(\frac{1}{20} - \frac{1}{30}\right) = \frac{13}{20} \times \frac{3}{10} = 39 \text{ mins}$$

**Q)** Two pipes A and B can fill a tank in 36 min. and 45 min. respectively. A waste pipe C can empty the tank in 30 min. First A and B are opened. After 7 min., C is also opened. In how much time, the tank is full?

- (a) 60 min                      (b) 30 min  
(c) 39 min                      (d) 13 min

**Ans: (c)**

Q) Working together A and B can do a job in 40 days, B and C in 36 days and all three together in 24 days. In how many days can B alone do the job?

- (a) 60      (b) 90      (c) 72      (d) 120

$$\begin{array}{r}
 (A+B) \rightarrow \frac{1}{40} \\
 (B+C) \rightarrow \frac{1}{36} \\
 \hline
 (A+B+C) \rightarrow \frac{1}{24}
 \end{array}
 \quad \textcircled{+}$$

$$\begin{array}{r}
 A+2B+C \rightarrow \frac{1}{40} + \frac{1}{36} \\
 - \quad A+B+C \rightarrow \frac{1}{24} \\
 \hline
 \text{(B's 1 day work)} = \left( \frac{1}{40} + \frac{1}{36} - \frac{1}{24} \right) \\
 = \frac{9 + 10 - 15}{360} = \frac{4}{360} = \frac{1}{90}
 \end{array}$$

90 days

**Q)** Working together A and B can do a job in 40 days, B and C in 36 days and all three together in 24 days. In how many days can B alone do the job?

- (a) 60      (b) 90      (c) 72      (d) 120

**Ans: (b)**

**Q)** A man undertakes to do a certain work in 150 days. He employs 200 men. He finds that only a quarter of the work is done in 50 days. How many additional men should he employ so that the whole work is finished in time?

- (a) 75                      (b) 85                      (c) 100                      (d) 120

$\frac{\text{no. of men} \times \text{no. of days}}{\text{fraction of work}}$

$$\frac{200 \times 50}{\left(\frac{1}{4}\right)} = \frac{(200+x) \times 100}{\left(\frac{3}{4}\right)}$$

$$30000 = (200+x) 100$$

$$300 = 200 + x$$

$$x = 100$$

**Q)** A man undertakes to do a certain work in 150 days. He employs 200 men. He finds that only a quarter of the work is done in 50 days. How many additional men should he employ so that the whole work is finished in time?

- (a) 75            (b) 85            (c) 100            (d) 120

**Ans: (c)**

**Q)** In a water tank there are two outlets. It takes 20 minutes to empty the tank if both the outlets are opened. If the first outlet is opened, the tank is emptied in 30 minutes. What is the time taken to empty the tank by second outlet ?

- (a) 30 minutes                      (b) 40 minutes  
(c) 50 minutes                      (d) 60 minutes

**Q)** In a water tank there are two outlets. It takes 20 minutes to empty the tank if both the outlets are opened. If the first outlet is opened, the tank is emptied in 30 minutes. What is the time taken to empty the tank by second outlet ?

- (a) 30 minutes                      (b) 40 minutes  
(c) 50 minutes                      (d) 60 minutes

**Ans: (d)**

**Q)** If 6 men and 8 women can do a piece of work in 10 days; and 13 men and 24 women can do the same work in 4 days, then what is the ratio of daily work done by a man to that of a woman ?

(a) 2 : 1

(b) 1 : 2

(c) 4 : 3

(d) 3 : 4

**Q)** If 6 men and 8 women can do a piece of work in 10 days; and 13 men and 24 women can do the same work in 4 days, then what is the ratio of daily work done by a man to that of a woman ?

- (a) 2 : 1                      (b) 1 : 2  
(c) 4 : 3                      (d) 3 : 4

**Ans: (a)**

**Q)** The efficiencies of A, B and C are in the ratio of 5 : 3 : 2. Working together, they can complete a task in 21 hours. In how many hours will B alone complete 40% of that task?

- (a) 28      (b) 24      (c) 35      (d) 21

**Q)** The efficiencies of A, B and C are in the ratio of 5 : 3 : 2. Working together, they can complete a task in 21 hours. In how many hours will B alone complete 40% of that task?

- (a) 28      (b) 24      (c) 35      (d) 21

**Ans: (a)**

**Q)** To do a certain work, the ratio of efficiency of A to that of B is 3 : 7. Working together, they can complete the work in  $10\frac{1}{2}$  days. They work together for 8 days. 60% of the remaining work will be completed by A alone in:

(a)  $5\frac{1}{2}$  days

(b) 5 days

(c)  $6\frac{1}{2}$  days

(d) 4 days

Q) To do a certain work, the ratio of efficiency of A to that of B is 3 : 7. Working together, they can complete the work in  $10\frac{1}{2}$  days. They work together for 8 days. 60% of the remaining work will be completed by A alone in:

(a)  $5\frac{1}{2}$  days

(b) 5 days

(c)  $6\frac{1}{2}$  days

(d) 4 days

**Ans: (b)**
