28 Nov 2024 Live Classes Schedule

9:00AM

28 NOVEMBER 2024 DAILY DEFENCE UPDATES

DIVYANSHU SIR

NDA 1 2025 LIVE CLASSES

✓ 1:00PM

PHYSICS - REFLECTION OF LIGHT - CLASS 1

NAVJYOTI SIR

✓ 4:30PM

ENGLISH - COMMONLY USED WORDS - CLASS 2

ANURADHA MA'AM

✓ 5:30PM

MATHS - LIMITS & CONTINUITY - CLASS 1

NAVJYOTI SIR

CDS 1 2025 LIVE CLASSES

✓ 1:00PM

PHYSICS - REFLECTION OF LIGHT - CLASS 1

NAVJYOTI SIR

✓ 4:30PM

ENGLISH - COMMONLY USED WORDS - CLASS 2

ANURADHA MA'AM

✓ 7:00PM

MATHS - TRIGONOMETRY - CLASS 2

NAVJYOTI SIR

LIGHT - REFLECTION

WHAT WILL WE STUDY ?

- Light - Introduction
- Reflection
- Plane Mirror And Image Formed ✓
- Spherical Mirrors - Concave And Convex Mirror
- Sign Convention And Mirror Formula
- Magnification

Light - Introduction

- A Form Of Energy Which Enables Human Beings And Creatures To 'See' Things.

- Light Rays Travel In A Straight Line.

Ray

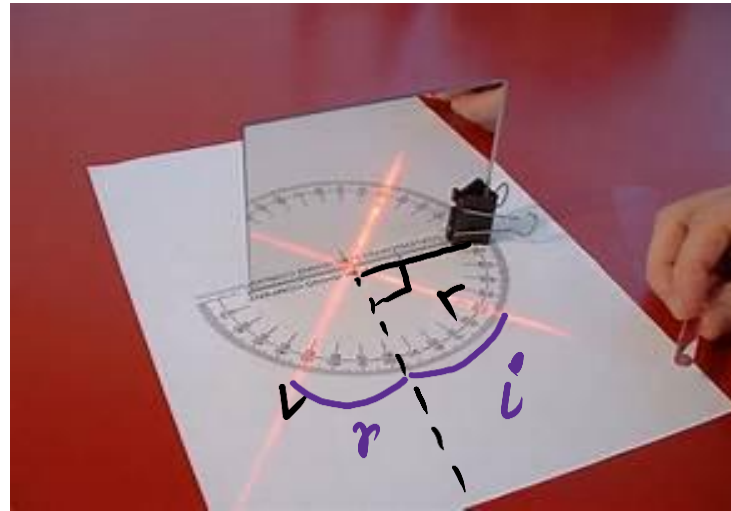

Reflection

- Light Rays Bounce Off A Surface, Generally Shiny.
- It Happens In A Single Medium.

LAWS OF REFLECTION

1. The incident ray, normal at the point of incidence, and reflected ray, all lie on the same plane.
2. angle of incidence = angle of reflection.

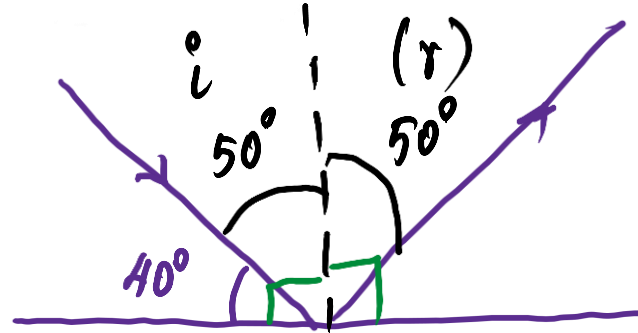

imaginary and perpendicular to mirror's surface.

EXAMPLE

A ray of light strikes a plane mirror at an angle of 40° with the mirror surface. What is the angle of reflection?

- (a) 40°
- (b) 50° ✓
- (c) 80°
- (d) 90°

EXAMPLE

A beam of light strikes a plane mirror at an angle of incidence of 30° . If the mirror is rotated by 15° clockwise, by how much does the angle between the incident and reflected beam change?

- (a) 15°
- (b) 30°
- (c) 45°
- (d) 60°

$$2\theta = 2 \times 15^\circ = 30^\circ$$

EXAMPLE

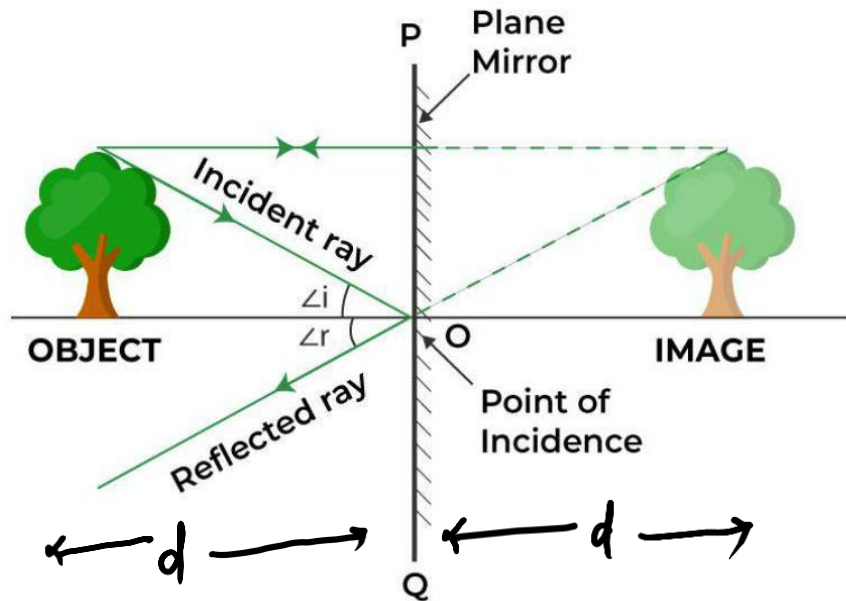

A ray of light traveling in air is incident at an angle of 45° on the surface of a plane mirror. If the mirror is tilted by 10° while keeping the incident ray fixed, what will be the change in the angle of reflection?

- (a) 5°
- (b) 10°
- (c) 20°
- (d) 45°

2θ , where θ is angle of tilt,
 $= 2 \times 10^\circ = 20^\circ$

Plane Mirror and Image Formed

- Erect (Upright). ✓
- the same size as the object.
- laterally inverted (Left side of object appears on right of image) — Lateral inversion,
- At the same distance behind the mirror as the object is in front of mirror.
- virtual (the image cannot be formed on a screen).

Real image - can be obtained
on screen (Movie Hall)

SPHERICAL MIRRORS

→ portion of sphere

Concave

Convex

TERMS ASSOCIATED WITH SPHERICAL MIRROR

- Centre of Curvature
- Pole
- Principal Axis
- Focus
- Aperture

diameter — (AB)

PF — focal length
(f)

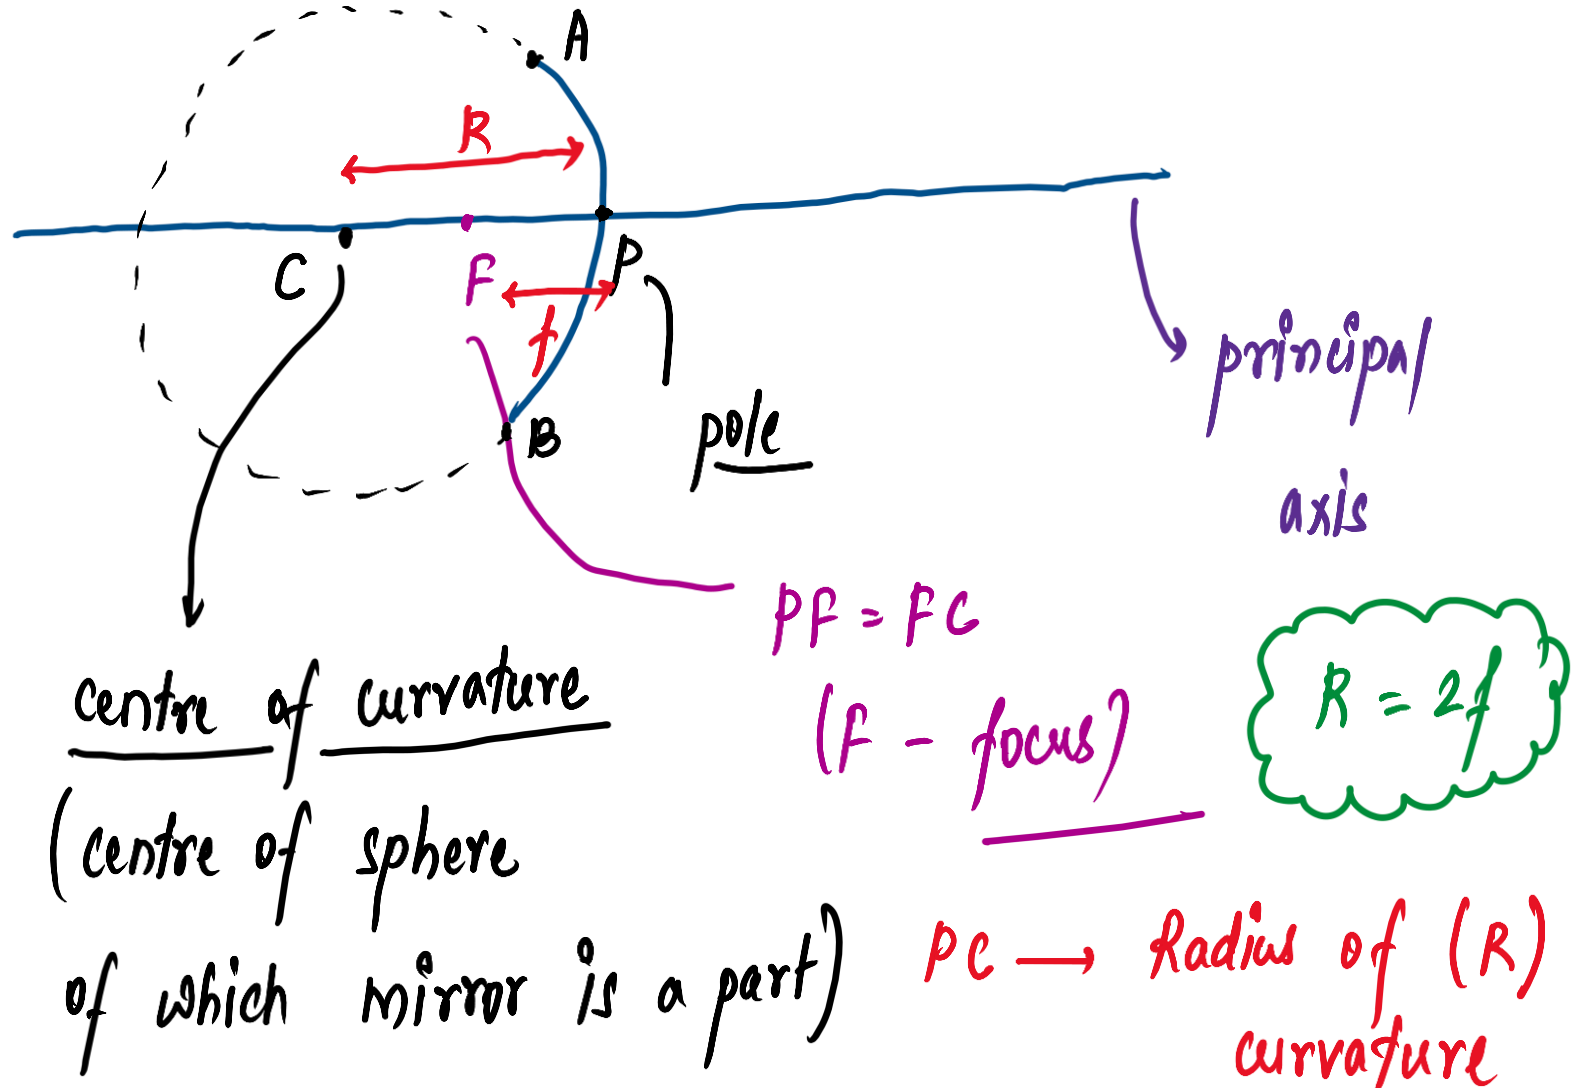

IMAGE FORMED BY CONCAVE AND CONVEX MIRROR

concave
(rays incident parallel
on mirror, converges at F)
converging mirror.

convex (rays incident parallel
on mirror, diverges, over
F)
diverging mirror.

IMAGE FORMED DUE TO DIFFERENT POSITION OF OBJECTS

Position of object

At infinity

Ray Diagram

Position of image

✓ At focus or in the focal plane ✓

Nature and size of image

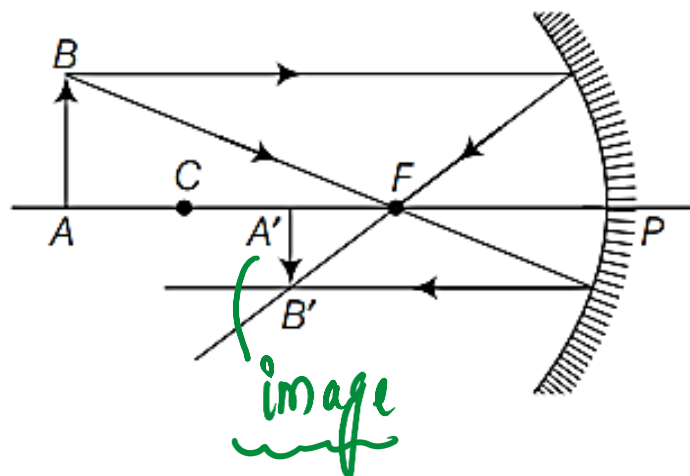

Real, inverted, extremely diminished point size

Very small in size

virtual - erect

real - inverted

Beyond the centre of curvature but at finite distance

Between focus and the centre of curvature

Real, inverted and diminished

IMAGE FORMED DUE TO DIFFERENT POSITION OF OBJECTS

Position of object

Ray Diagram

Position of image

Nature and size of image

At the centre of curvature

At the centre of curvature

Real, inverted and equal to the object

Between focus and centre of curvature

Beyond the centre of curvature

Real, inverted and bigger than object

IMAGE FORMED DUE TO DIFFERENT POSITION OF OBJECTS

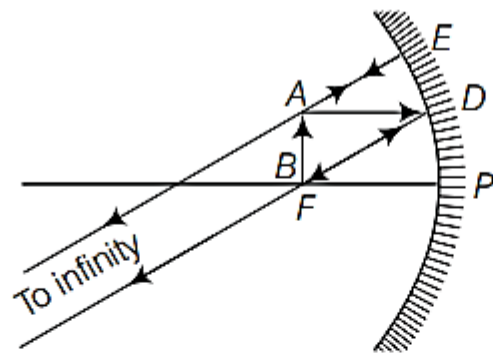

Position of object

Ray Diagram

Position of image

Nature and size of image

At the focus

At infinity

Real, inverted and extremely magnified ✓

Between the pole and focus

Virtual, erect and magnified

Behind the mirror ✓

CONVEX MIRROR

Position of the object	Position of the image	Size of the image	Nature of the image
Any where between pole (P) and in finity (∞)	Between P and F back of the mirror	Small ✓	<u>Virtual and erect</u>
At in finity	At F ✓	Very small in size ✓	<u>Virtual and erect</u>

(b)
(a)

(a)

(b)

EXAMPLE

The image formed by a concave mirror for an object placed between the pole and the focus is:

- (a) Real, inverted, and diminished.
- (b) Real, inverted, and enlarged.
- (c) Virtual, upright, and enlarged. ✓
- (d) Virtual, inverted, and diminished.

USE OF CONCAVE MIRRORS

Shaving Mirrors and Makeup Mirrors

Dentist mirrors

→ enlarged image

→ strong parallel beams of light

Used in Torches, Beam lights

Used in Solar Furnaces to Produce Heat

→ At the focus, massive heat is generated.

(converging mirror)

USE OF CONVEX MIRRORS

→ generates very small
images.
↓
wide area can be shown.
→

Year-view mirror in vehicles.

SIGN CONVENTION

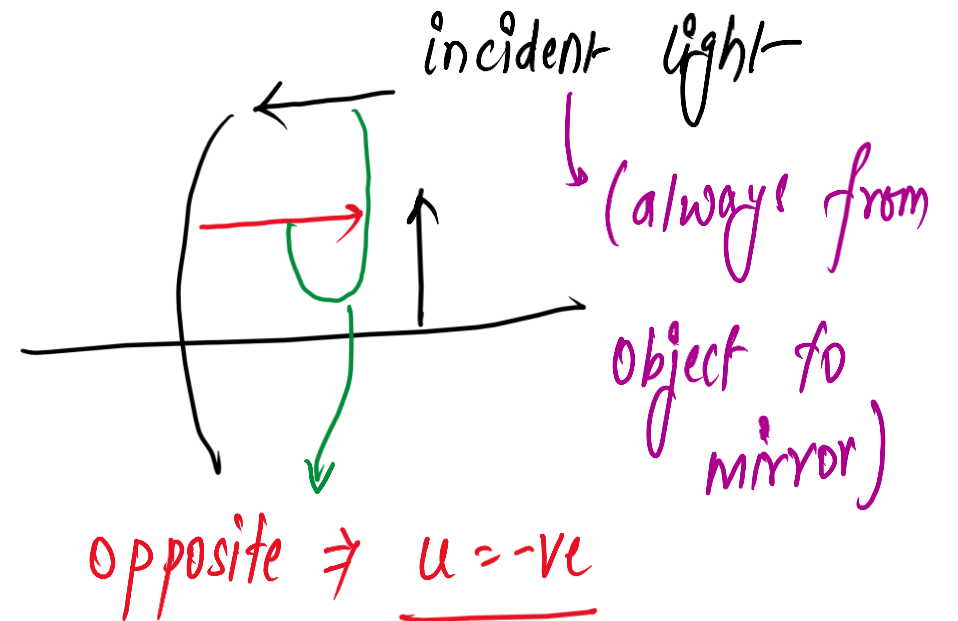

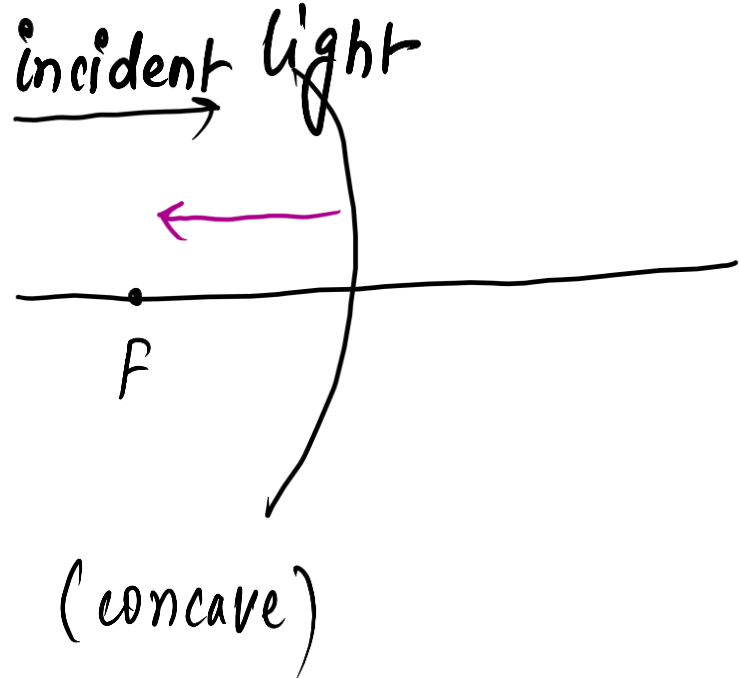

Image distance = $v = +ve$
(generally)

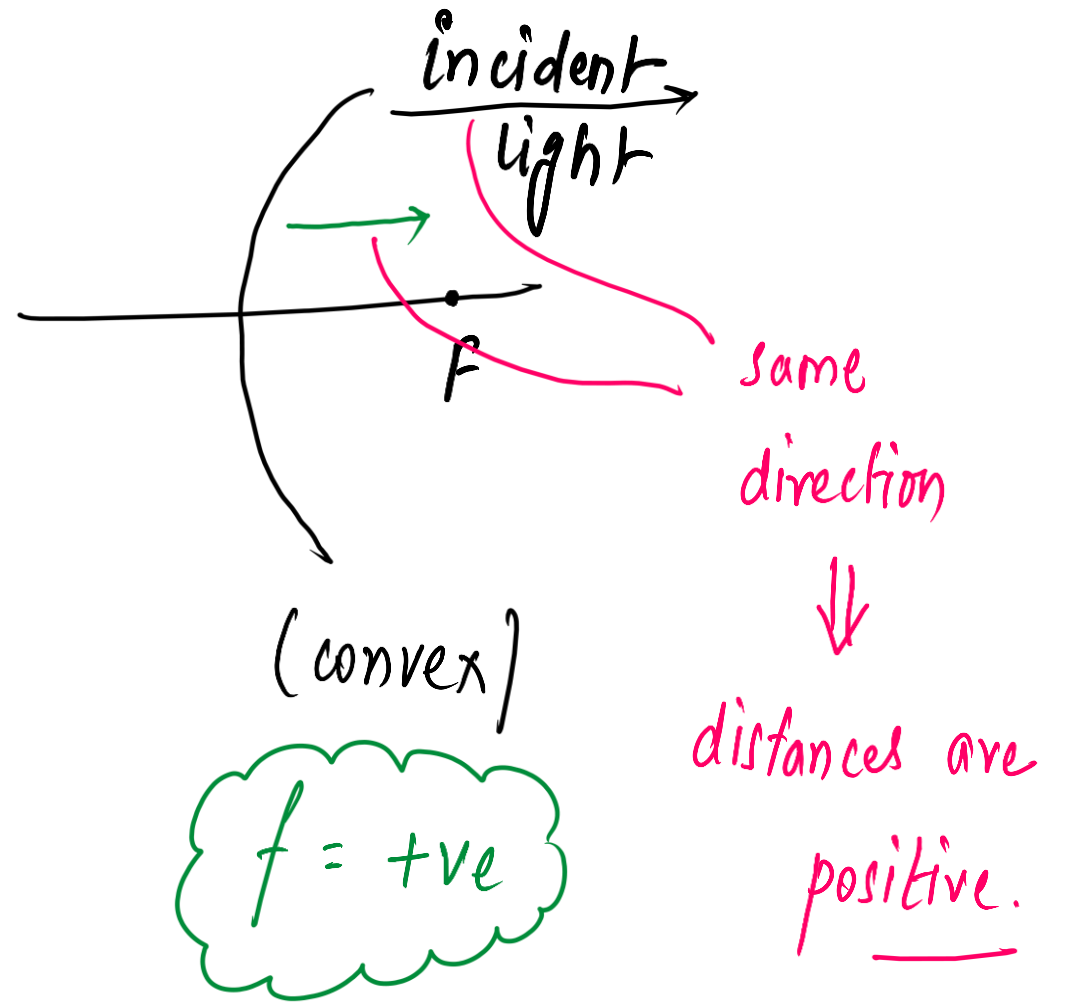

object distance = $-ve$
(u) (generally)

Focal Length

$f = -ve$

$f = +ve$

EXAMPLE

Which of the following statements is correct regarding spherical mirrors?

1. A concave mirror can produce a real image. ✓
2. A convex mirror always produces a virtual image. ✓
3. The focal length of a convex mirror is negative. ✗
4. The focal length of a concave mirror is positive. ✗

Options:

- (a) 1 and 2 only ✓
- (b) 1, 3, and 4 only ✗
- (c) 2, 3, and 4 only ✗
- (d) 1, 2, 3, and 4

MIRROR FORMULA

$$\frac{1}{v} + \frac{1}{u} = \frac{1}{f}$$

$v \rightarrow$ image distance

$u \rightarrow$ object distance

$f \rightarrow$ focal length

MAGNIFICATION (m)

- The ratio of the height of the image (h') to the height of the object (h).

- (+ve means erect image)
- (-ve means inverted image)
- ($|m| > 1$ means large image)
- ($|m| < 1$ means small image)

SUMMARY

- **Reflection of Light**
- **Plane and Spherical Mirrors**
- **Image formed by Concave and Convex Mirrors**
- **Uses of Spherical Mirrors**
- **Mirror Formula and Magnification**
